

Japan's ODA: Rolling Plan for the Cook Islands

As of December 2012

<p>Basic Policy To achieve sustainable and environmental-friendly economic growth and improvements in living standards</p>
--

[Priority Area 1] Reduce Vulnerability																																																														
<p>Development Issue 1-1</p> <p>Strengthening of Infrastructure for Economic Growth</p>	<p>[Background] The scale of the major industries such as tourism or fisheries in the Cook Islands is small, thus many Cook Islanders tend to migrate to New Zealand or other countries for opportunities to study or employment. This causes serious problems with depopulation in the Cook Islands. Price levels are comparably high because most consumable goods are imported. Power shortages are serious problems among remote islands and power prices are high. Water shortages can be experienced in the dry-season. In the "National Sustainable Development Plan (NSDP) 2011-2015", the Government of the Cook Islands set priority areas in promoting tourism/agriculture and fisheries, improving infrastructure and security of energy to support economic growth and achieved sustainability and resilience in environment.</p>	<p>[Japan's Assistance Policy] Japan will provide assistance to the major industry growth sectors and to economic infrastructure development with a focus on utilising Japan's technical expertise and experience through Dialogue and Training programmes under Technical Cooperation. The Grant Assistance for Grassroots Human Security projects scheme can be used for such purposes of assistance.</p>

<p>[Background] The nursing care for the elderly and the disabled are under developed in the Cook Islands. The recent increase of non-communicable diseases demonstrate that social services including the health and also education sectors can be further developed. The Government of the Cook Islands set priorities in its NSDP 2011-2015 providing social welfare services to children, youths and people with disabilities and the elderly, and high quality and affordable health and medical services along with high quality education to all the Cook Islanders.</p>	<p>[Japan's Assistance Policy] In regard to the areas of social-welfare and health, Japan plans to promote the prevention of disease by improving medical systems in rural areas and provide life-style education through Grassroots Human Security projects and training programmes on the basis of Japan's Global Health Policy 2011-2015. In the education sector, Japan also supports science and mathematics through training courses and Grassroots Human Security projects.</p>

[Priority Area 2] Environment/Climate Change													
Development Issue 2-1	[Background] The environment in the Cook Islands can be easily impacted by economic development. Thus environmental conservation and countermeasures against climate change are very important for the Cook Islands. The Government of the Cook Islands set priorities in its NSDP 2011-2015 to strengthen environmental conservation measures including natural resources and biological diversity.			[Japan's Assistance Policy] Japan aims to disseminate through the Pacific region lessons learnt from "The Solid Waste Management Project for the Pacific Region" implemented during 2006-2010 under Technical Cooperation. Japan also supports creating a recycling-based society through receiving trainees in the area of waste management. Japan further supports improving conservation measures in the Cook Islands through training courses related to conservation.

Project for the Improvement of Regional Initiatives on Solid Waste Management	TCP									Region Wide
		To implement training courses in the areas such as management of water resource conservation	Training and dialogue Programme on Environmental Issues	TR									
Development Issue 2-2	[Background] Due to its geographic location, the Cook Islands is vulnerable to climate change and natural disasters such as cyclones or tsunamis. In light of this situation, appropriate actions against climate change and upgrading disaster-prevention systems have become urgent and vital tasks. The Government of the Cook Islands set forth to enhance disaster-prevention systems and responses to climate change including the introduction of early warning systems in the NSDP 2011-2015. It also aims to have all electricity from renewable energy sources by 2020.			[Japan's Assistance Policy] In the area of renewable energy, Japan assists the Cook Islands in installing photo voltaic system through the PEC (Pacific Environment Community) fund as pledged at PALM 5 in 2009. Japan also supports improving disaster-prevention measures in the Cook Islands through implementing disaster-related training courses.
